The present sequence is a human OCT1p (organic cation transporter-like protein), a member of the superfamily of sugar and other transporter molecules that have 12 transmembrane domains. The sequence is derived from a human foetal brain CDNA library. The protein is highly expressed in brain tissue and has nootropic, neuroprotective, neuroleptic, anticonvulsant, antiParkinsonian, antidepressant activities. The present sequence is used to regulate a variety of cellular processes e.g. cell proliferation, differentiation and survival, screen OCT1p modulators and detect mutation in OCT1p gene. OCT1p modulators can be used to treat or prevent chronic neurodegenerative disorders (e.g. Alzheimer's, Parkinson's, Huntington's and ALS), CNS disorders (e.g. schizophrenia, panic, depression), behavioural, sleep and eating disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ó;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Corynebacterium glutamicum; brevibacterium lactofermentum; MCT; membrane construction and membrane transport protein; petroleum spill; hydrocarbon degradation; gram positive aerobic bacterium; marker; identification; microorganism; fine chemical production; transformation; genome mapping; genetic engineering.

```

m

```
The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, coryneform bacterium coryneform bacterium coryneform bacterium and identifying a homologue of a gene derived from coryneform bacterium, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAF67743 to AAF68080 encode the Corynebacterium glutamicum membrane construction and membrane transport (MCT) proteins given in AAB76510 to AAB76847. The MCT nucleic acids and proteins are useful in the identification of microorganisms which can bused to produce fine chemicals, for modulating fine chemical production in C glutamicum or related bacteria (e.g. Brevibacterium lactofermentum), the typing or identification of C. glutamicum or related bacteria, as reference points for mapping C. glutamicum genome, and as markers for transformation.

AAF68082 and AAF68082 represent sequencing primers which are used in an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Corynebacterium glutamicum nucleic acids encoding membrane construction and membrane transport proteins or their portions, useful for typing or identifying C. glutamicum or related bacteria, and as markers for transformation -

AAY AAA16618 to AAA16697 encode the human secreted proteins given in AAY94898 to AAY94890, isolated from human adult brain, adult thyroid, adult placenta, adult testis, whole embryo, adult cartilage, kidney, call that placenta, adult testis, whole embryo, adult cartilage, kidney, adult placenta, adult thymus, foetal placenta, adult uterus, adult tumour, cand adult bladder, CDNA libraries. The polynuclectides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans cand animals. The polynuclectides can be used as markers for tissues in which the protein is preferentially expressed, as molecular weight conditions to markers on Southern gels, and as chromosome markers or to map gene positions. The proteins can be used in the treatment of immune deficiency (SCID), as well as viral, bacterial, fungal and other infections. These infections include human immunodeficiency virus (HIV), hepatitis, herpesviruses, mycobacteria, Leismannia spp., malaria and candidiasis. The proteins can be used to treat autoimmune disorders such expendidiasis. The proteins can be used to treat autoimmune disorders such candidiasis. The proteins can be used to treat autoimmune pulmonary inflammation, can disease and cautoimmune thyroiditis, insulin dependent cautoimmune inflammatory eye disease. The proteins can also be used to treat allergic conditions, such asthma. AAA16698 to AAA16774 represent creat allergic or the human secreted proteins from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          11;
                                                                                                                                                                                                                                                                                                                                                        The sequences given in AAB47271-76 represent human organic anion transporter (hOAT) polypeptides. hOAT polypeptides are preferentially expressed in the liver and kidneys of humans. OAT's are membrane proteins that facilitate the transport of organic anions across the cell membrane. The mechanism of transport is thought to be a secondary of tertiary active transport involving exchange of another organic anion. Hought to be splice variants as they are identical except at the C-terminal end. HOAT proteins and the DNA encoding them, may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate HOAT expression.

```
This sequence represents a human organic anion transporter protein OAT3. The sequence is used to regulate the transport of anions in cerebral tissue, including drug molecules, and regulation of this transport.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Organic anion transporter protein OAT3 expressed in cerebral tissue, antibodies to it and gene encoding it for study of cerebral transport of anions including drug molecules

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This is the amino acid sequence of the rat OCT-1 protein, a new transporter protein able to transport cationic xenobiotics and pharmaceuticals from the blood into liver or kidney epithelial card times intestine. The gene was isolated by injecting a rat kidney gene library into Xenopus laevis oocyte and isolating clones conferring uptake of 14C-tetraethylammonium. One clone designated oCT-1 was isolated. Expression of the gene was detect in proximal renal tubule cells, in liver epithelial cell and in intestinal enterocytes. The DNA can be used to generate transgenic cells for use in in vitro test for renal/biliary excretion or intestinal resorption of xenobiotics and pharmaceuticals. The protein or cells expressing it can also be used to isolate modulators that block uptake of pharmaceutical by the renal tubules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Transporter protein for cationic xenobiotic(s) and pharmaceuticals, and related DNA and transformed cells – used e.g. to assess excretion and resorption of cationic cpds.

The sequence is used to regulate the transport of anions in cerebral tissue, including drug molecules, and regulation of this transport.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Organic anion transporter protein OAT3 expressed in cerebral tissue, antibodies to it and gene encoding it for study of cerebral transport of anions including drug molecules

The liver-specific org. anion transporter OAT2 can transport various substances including dicarboxylic acids, prostaglandins, non-sterioid anti-inflammatory agents and anti-tumor agents. This sequence represents the rat liver anion transporter OAT2 protein described in the method of the invention.

Agents that bind the nucleic acid encoding the osteoclast transporter protein can be used to decrease its expression, thereby decreasing osteoclast activity. The agents can be used to treat osteoporosis and osteopetrosis.

Murine; organic anion transporter 6; mOATP6; cancer; inflammation; cardiovascular disease; central nervous system disorder; kidney disease; liver disease; autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is murine organic anion transporter 6 (mOATP6). mOATP6 protein is useful for screening compounds which inhibit or stimulate the function of mOATP6 and also compounds that neither agonise nor antagonise OATP6. The identified agonists and antagonists are useful for prevention and treatment of human diseases, including cancer, inflammation, cardiovascular disease, central nervous system disorders, kidney diseases, liver disease and autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Murine organic anion transporter 6 polypeptide, useful for identifying agonists/antagonists that are useful in treatment of cancer, kidney disease, autoimmune disease, inflammation and cardiovascular disease

Agents that bind the nucleic acid encoding the osteoclast transporter protein can be used to decrease its expression, thereby decreasing osteoclast activity. The agents can be used to treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        treatment of

                                                                                                                                                                                                                                                                                                                                                                                                7;
                                                                                                                                                                                                            AAF67743 to AAF68080 encode the Corynebacterium glutamicum membrane construction and membrane transport (MCT) proteins given in AAB76510 to AAB76847. The MCT nucleic acids and proteins are useful in the identification of microorganisms which can be used to prouuce fine chemicals, for modulating fine chemical production in C. glutamicum or related bacteria (e.g. Brevibacterium lactofermentum), the typing or identification of C. glutamicum or related bacteria, as reference points for mapping C. glutamicum genome, and as markers for transformation.

AAF68082 and AAB768082 represent sequencing primers which are used in an example from the present invention.
                                                                                                                                  Corynebacterium glutamicum nucleic acids encoding membrane construction and membrane transport proteins or their portions, useful for typing or identifying C. glutamicum or related bacteria, and as markers for transformation -

Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L.lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                         273

TISSUE SPECIFICITY: STRONGLY EXPRESSED IN KIDNEY, SKELETAL MUSCLE,
HEART AND PLACENTA.
BISBASE: DEFECTS IN SLC22A5 ARE THE CAUSE JF SYSTEMIC PRIMARY
CARNITINE DEFICIENTY (CDSP). CDSP IS AN AUTOSOMAL RECESSIVE
DISONDER OF FATTY ACID OXIDATION CAUSED BY DEFECTIVE CARNITINE
TRANSPORT. PRESENT EARLY IN LIFE WITH HYPOKETOTIC HYPOCLYCEMIA AND
ACUTE METABOLIC DECOMPENSATION, OR LATER IN LIFE WITH SKELETAL
MYOPATHY OR CARDIOMYOPATHY.
SIMILARITY: BELONGS TO THE SUGAR TRANSPORTER FAMILY. ORGANIC
CATION SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             "Two novel missense mutations of the OCTN2 gene (W283R and V446F) in a patient with primary systemic carnitine deficiency."; Hum. Mutat. 15:118-118(2000).
